

AHEAD OF WHAT'S POSSIBLE™

Stupid Pluto Tricks with the ADALM-PLUTO

FOSDEM 2018

ROBIN GETZ

MICHAEL HENNERICH

02/04/2018

Agenda

- ▶ Analog Devices and Education
- ▶ Introduction to the ADALM-PLUTO
- ▶ Software support
 - Libiio
 - Supported applications
- ▶ Building custom images
- ▶ Watching airplanes (via dump1090)
- ▶ Detecting cell phone jammers

Analog Devices Educational offering

Secondary Schools

First Year University:
General Technology

Second/Third Year
University: Electrical
Engineering

Fourth Year/MSc
University: Electrical

ADALM-PLUTO

AD9363 Software Defined Radio Active Learning Module

- ▶ Captures I/Q Samples
 - 12-bits
 - 65.1 kSPS to 61.44 MSPS
 - 200kHz to 20 MHz signal bandwidth
- ▶ Sends them to PC for processing over USB2
- ▶ \$149
 - \$99 introductory price
- ▶ Tuning range;
 - ▶ 325 MHz to 3.8 GHz

Inside the ADALM-PLUTO

ADALM-PLUTO Design

- ▶ Design is open, just like all other ADI designs
 - Shows a minimal full system design
 - From antenna to USB
 - RF to bits
 - Only 72 parts on the BOM
 - All IC, R, C, L, connectors, etc
 - Schematics, Gerbers, BOM, Allegro Files posted
 - <https://wiki.analog.com/university/tools/pluto/hacking/hardware>
 - Passes FCC and CE tests
 - Achieves better RF than AD9363 datasheet specs

Regulation? (FCC is local, but most countries have similar organizations)

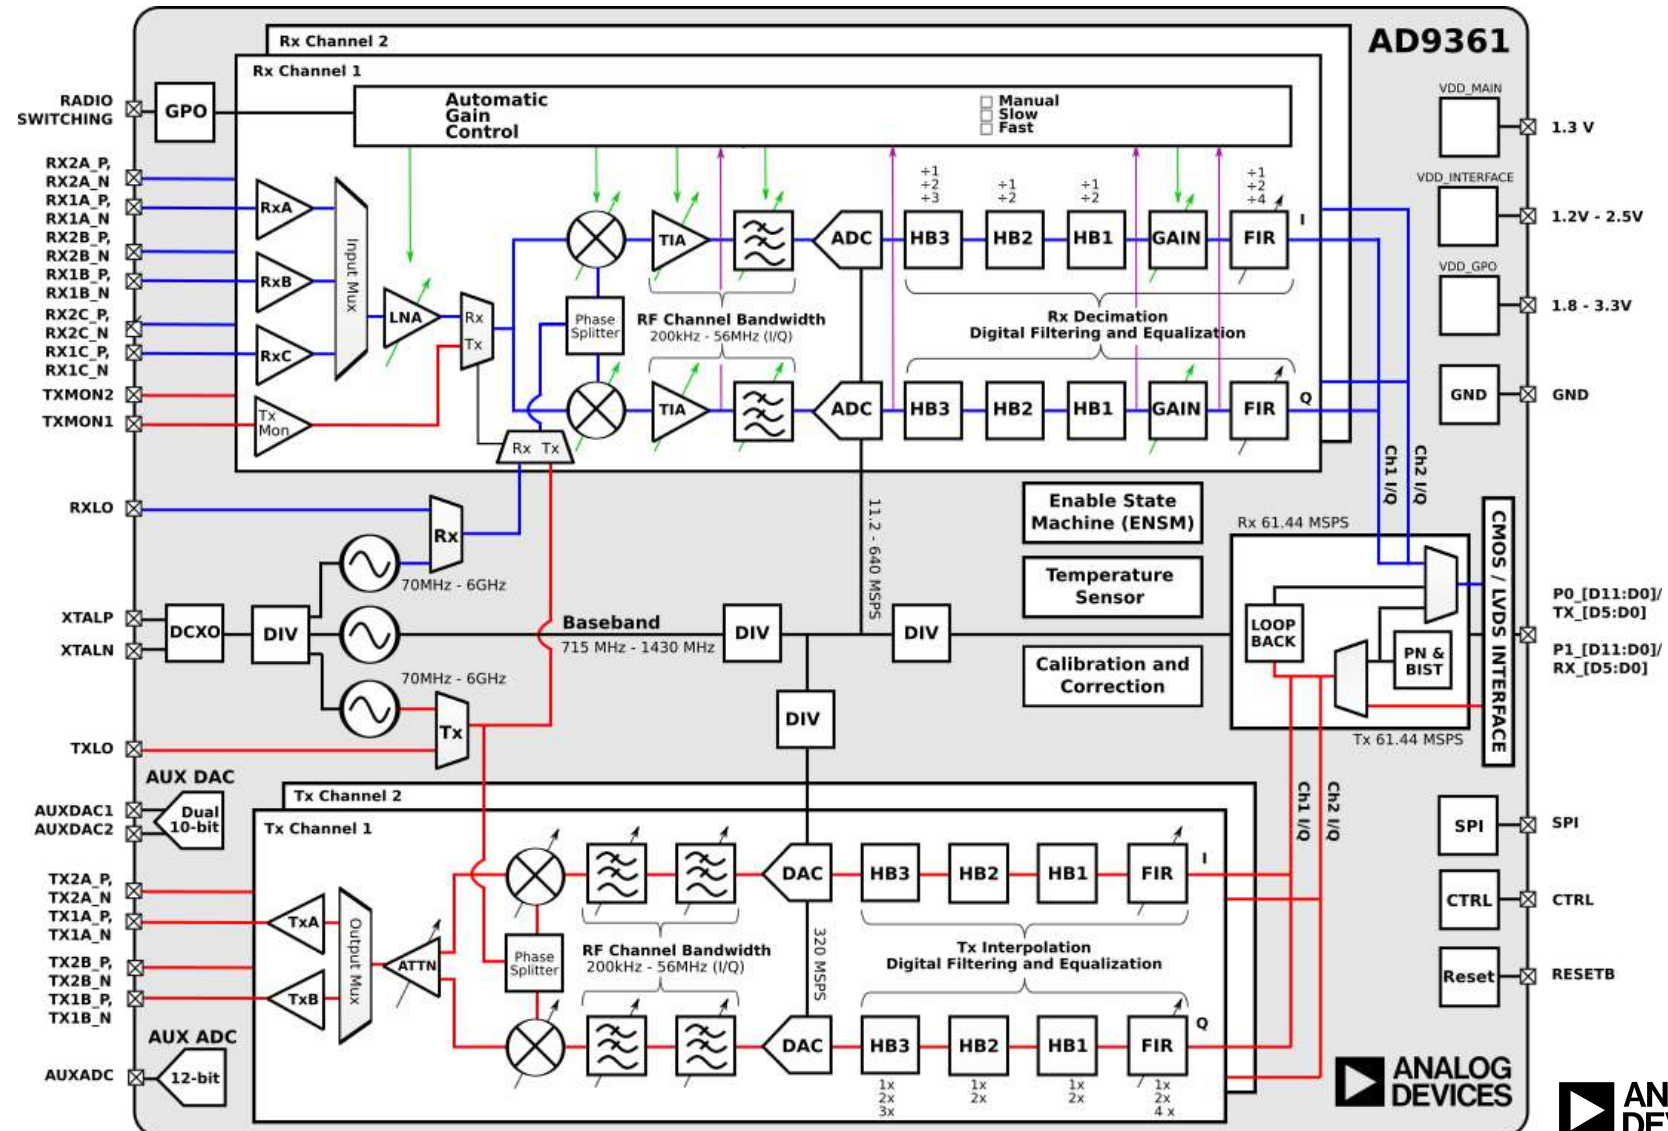

- ▶ ADALM-PLUTO is not a “Radio”.
 - WiFi, BLE, transmitters
 - Waveform, dwell time, LO frequency, bandwidth, etc.
 - These require type **certification**
- ▶ ADALM-PLUTO is nothing more than:
 - RF arbitrary waveform generator
 - RF capture device
 - These sorts of devices are FCC **verified**.
 - this device does not cause harmful interference.
 - this device must accept any interference received
 - We do this – we pass part 15 (Class A)
 - For use in business/industrial/commercial environments only.
- ▶ End users make it a radio.
 - End users may need certification
 - Highly encourage every user to get their HAM radio license
- ▶ The FCC allows a hobbyist to build up to five devices of a single design for personal use with no testing whatsoever.
- ▶ If you are contacted by the FCC (or anyone else) about a matter of spectrum interference, immediately stop using the device, don't use it again.
- ▶ Home-built transmitters, like all Part 15 transmitters, are not allowed to cause interference to licensed radio communications and must accept any interference that they receive.
- ▶ If the Commission determines that the operator of a transmitter has not attempted to ensure compliance by employing good engineering practices then that operator may be fined up to \$10,000 for each violation and \$75,000 for a repeat or continuing violation.

AD9363 Under the Hood

For more information:

- <http://www.analog.com/ad9361>
- <http://www.analog.com/ad9364>
- <http://www.analog.com/ad9363>

- ◆ AD9361: 2 Rx + 2 Tx
- ◆ AD9364: 1 Rx + 1 Tx
- ◆ AD9363: 2 Rx + 2 Tx
- ◆ Major sections:
 - RF input/output paths
 - RF PLL/LO
 - Clock generation
 - ADC/DAC
 - Digital filters
 - Digital interface
 - Enable state machine
 - RX Gain (AGC)
 - TX Attenuation
 - Aux DAC/ADC and GPOs
 - Analog and Digital Correction/Calibration

Performance Data (meets or exceeds AD9363 specs)

► Tx:

- EVM (64 QAM, LTE10) of -46dB @ 800MHz
- Waveform created with MathWorks LTE Toolbox, played out the ADALM-PLUTO, connected to Keysight PXA 9030A via SMA cable, and analyzed with Keysight Signal Studio.

► Rx:

- EVM (64 QAM, LTE10) of -43 dB @ 800MHz
- Waveform created with MathWorks LTE Toolbox, played out Keysight Arbitrary waveform generator connected to the ADALM-PLUTO via SMA cable, and then analyzed with Keysight Signal Studio.

It's a learning tool, for educational settings

Just like the dwarf planet, ADALM-PLUTO is the dwarf SDR

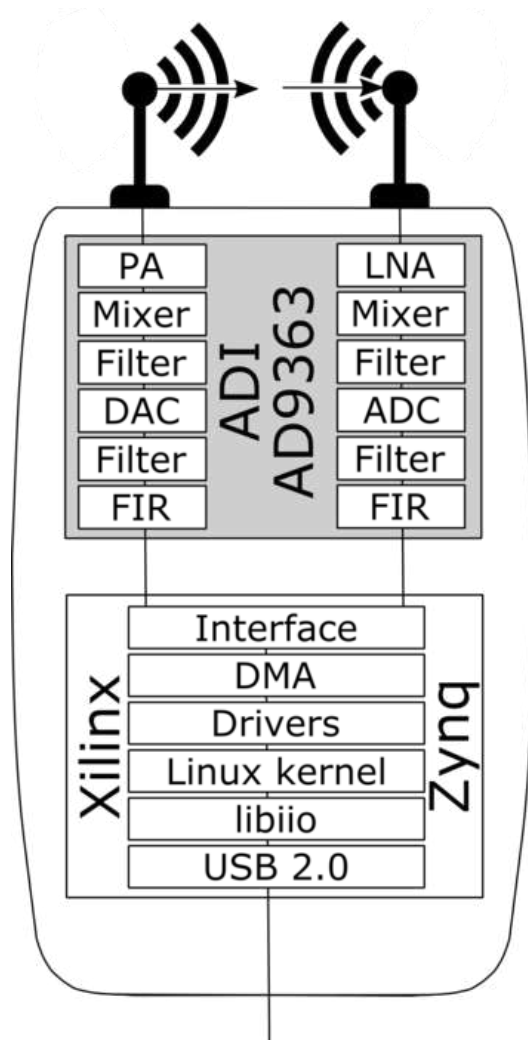

- Temp range : 10°C to 40°C
 - Easier to correct for oscillator we used
- USB 2.0
 - 7 – 12 MSPS, depending on the host, without losing samples.
- FPGA Size : tiny

Resource	Utilization	Available	Utilization %
LUT	6422	17600	36.49
LUTRAM	1066	6000	17.77
FF	13162	35200	37.39
BRAM	2	60	3.33
DSP	70	80	87.50
IO	51	54	94.44
BUFG	3	32	9.38

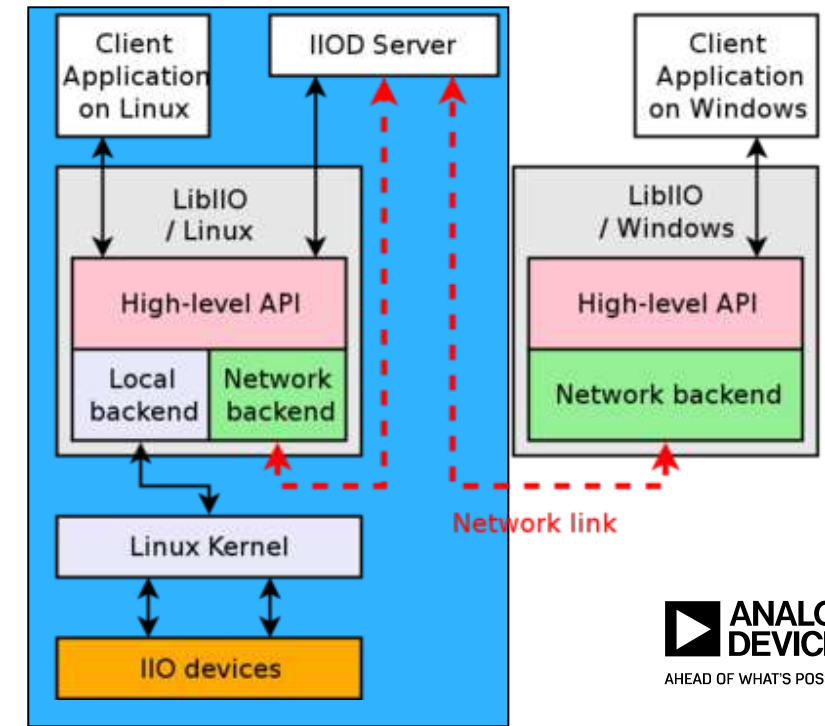

- ARM : Single Core
- Oscillator
 - Rakon RXO3225M,
 - ± 25 ppm (uncorrected)
 - ± 10 ppm (factory calibrated)
 - ± 1 ppm (tuned for temperature)
- Tuning Range:
 - 300 – 3800 MHz (datasheet specs)
 - 70 – 6000 MHz (out of spec)
- RF Shielding
 - None
- RF Filtering
 - None
- Output power
 - 0dBm (CW), varies with frequency

ADALM-PLUTO software stack

- ▶ Runs Linux inside the device
- ▶ Uses Linux's IIO framework to expose I/Q data and control
- ▶ Multi-Function Device
 - Native IIO over USB
 - Serial over USB
 - Ethernet over USB
 - Mass Storage
 - Device Firmware Update
- ▶ Host
 - USB dongles

- ▶ Cross Platform
 - Windows
 - Linux
 - MAC
- ▶ Cross framework
 - Stacked libraries based on libiio

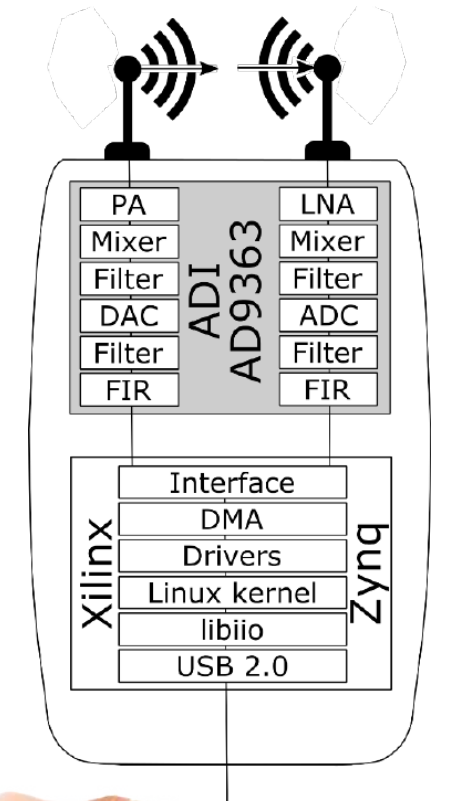

ADALM-PLUTO possible use cases include IoT!

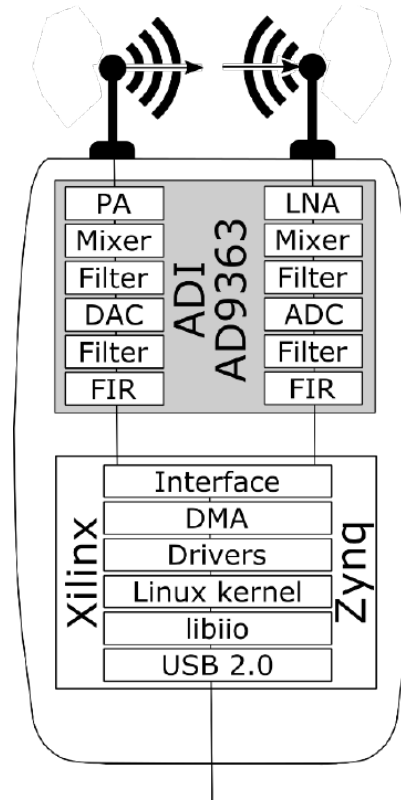

Connect to host

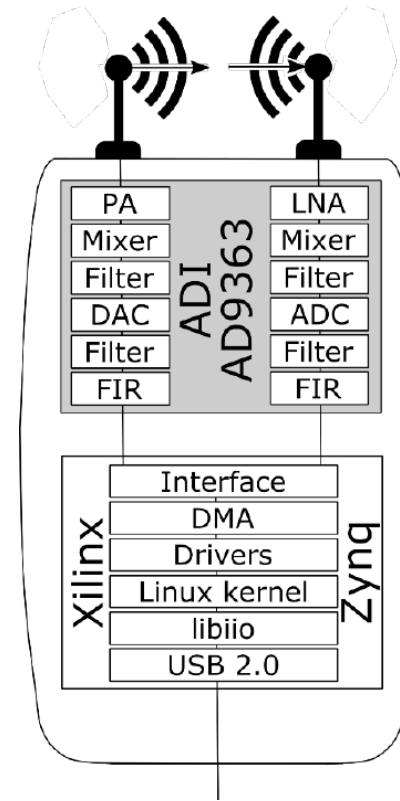

USB Thumb Drive

USB LAN

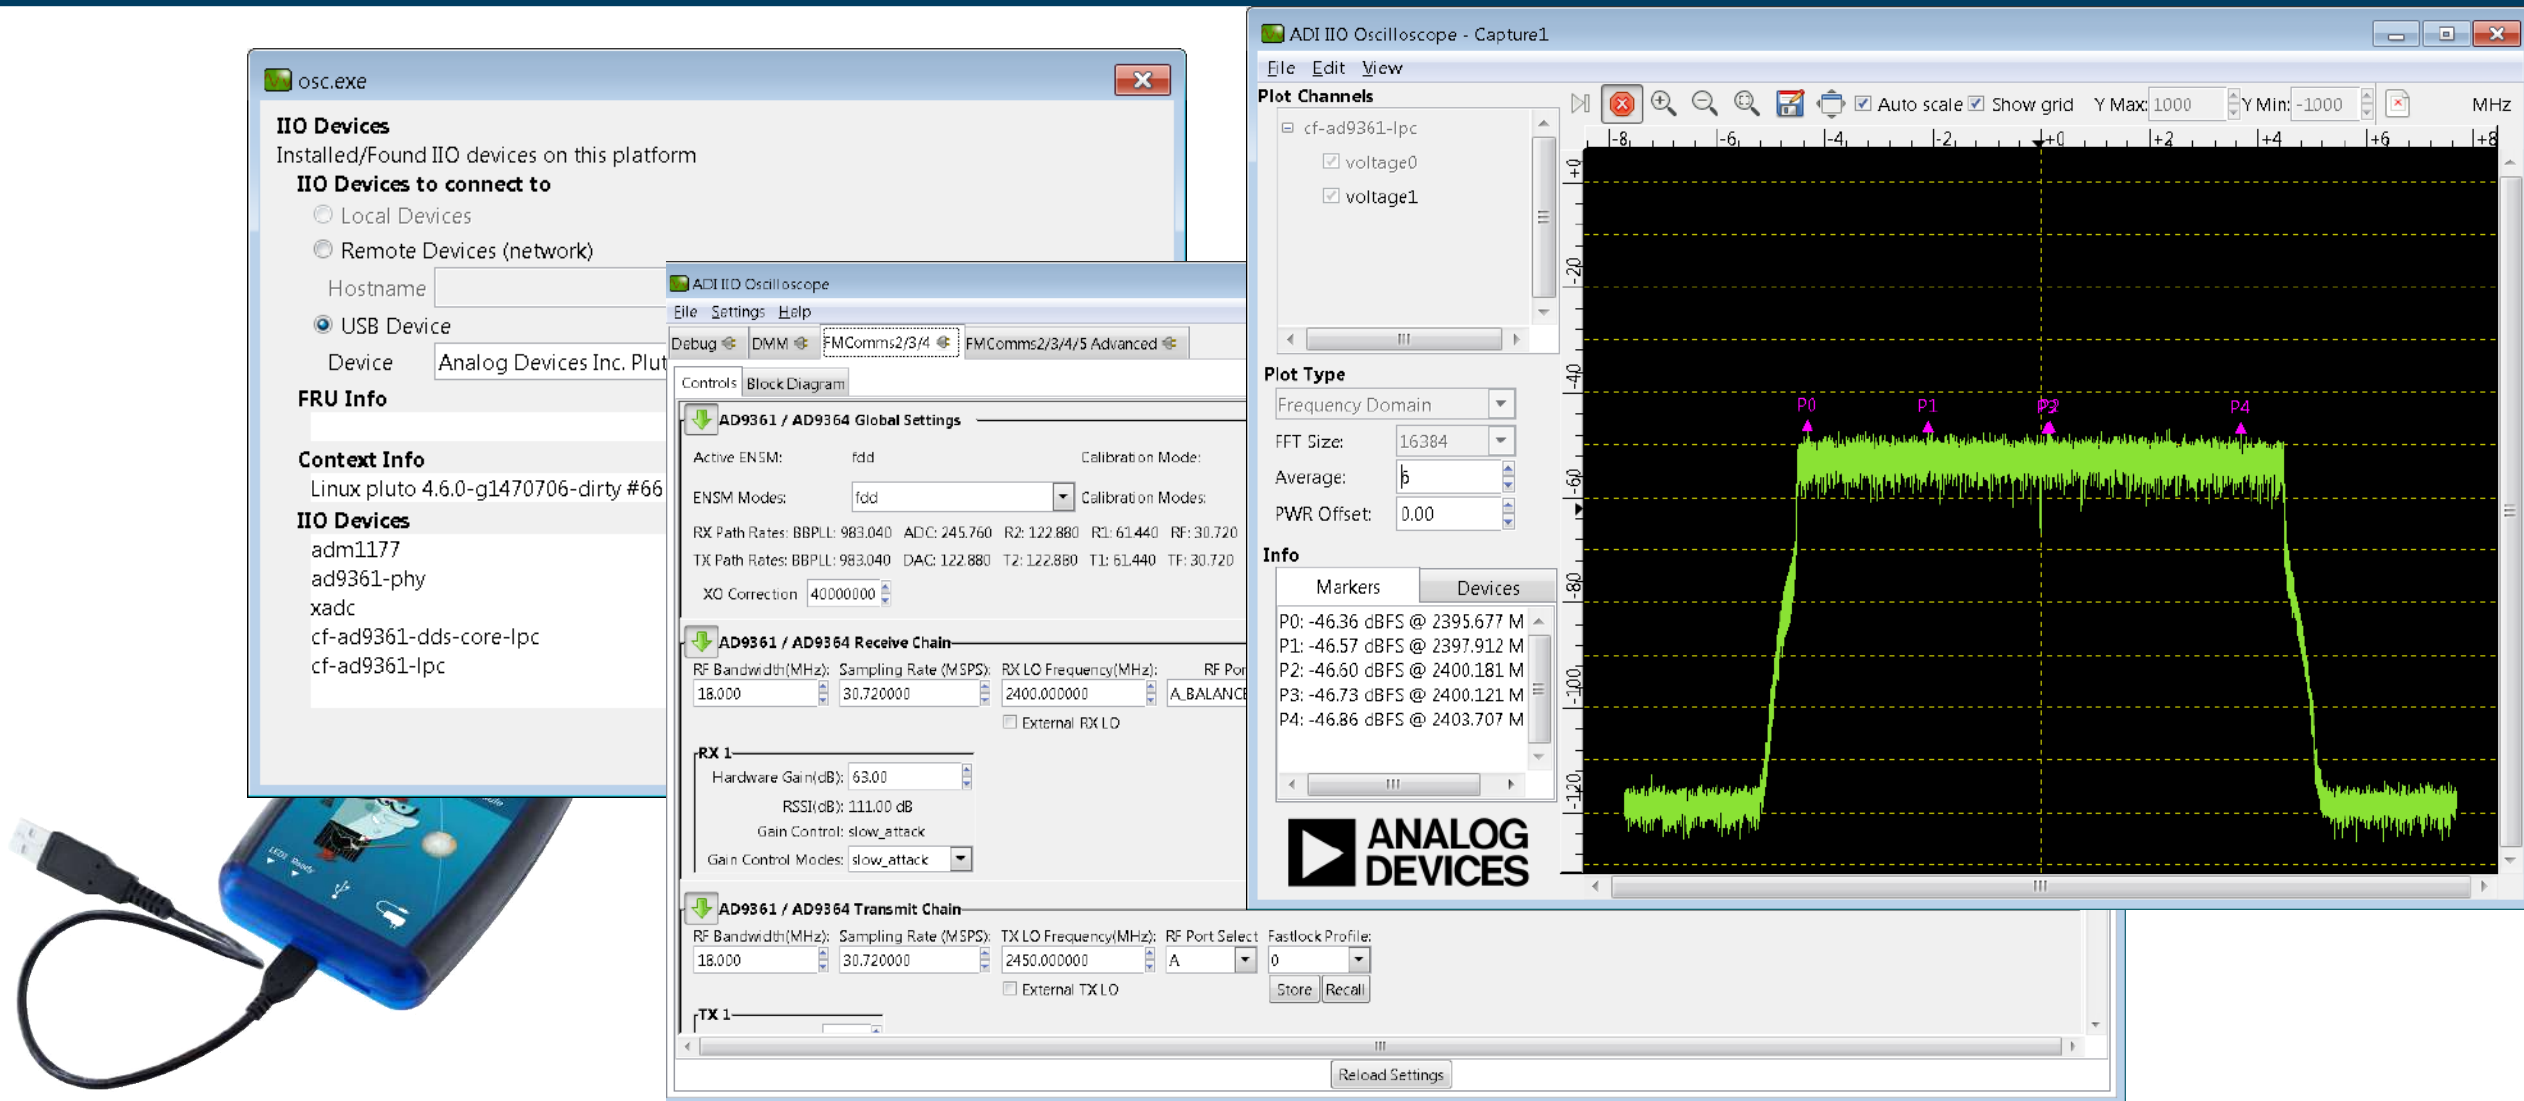

USB WiFi

USB Audio

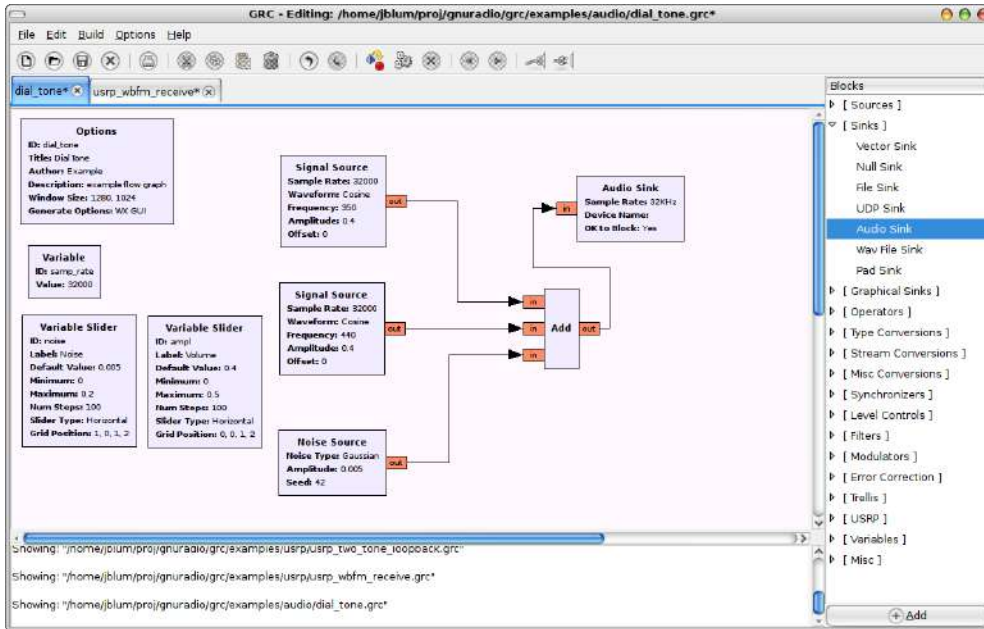

ADALM-PLUTO with IIO Oscilloscope

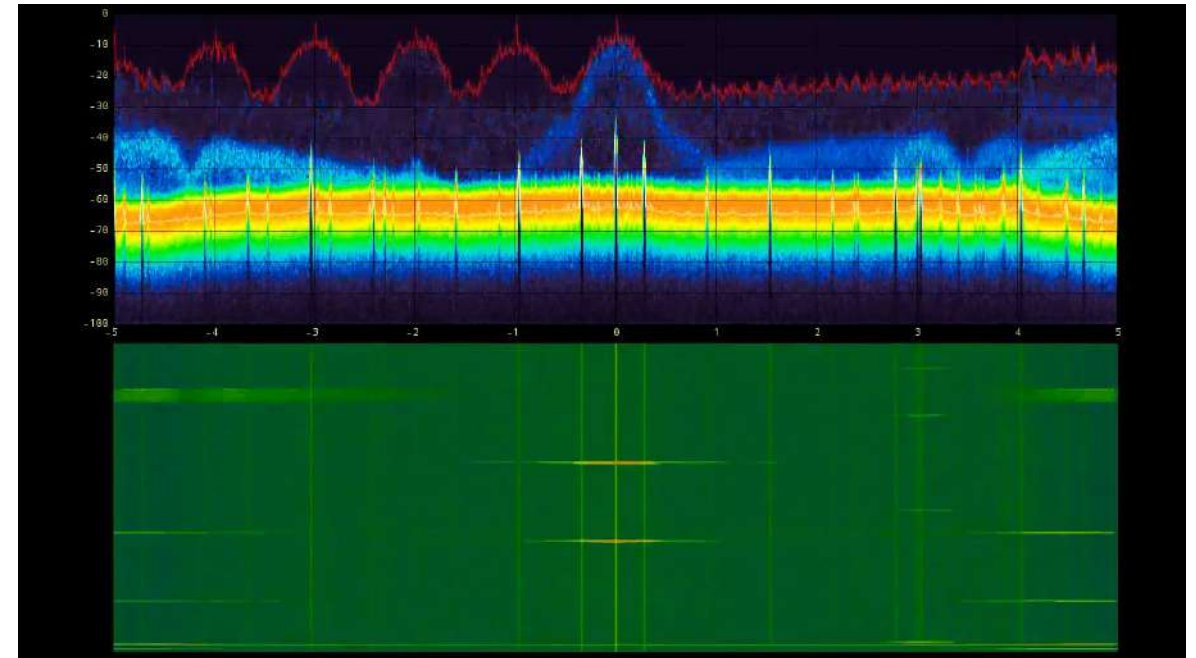

GNU Radio

- ▶ GNU Radio
 - Open-source software development toolkit that provides signal processing blocks to implement software radios.

- ▶ GR fosphor
 - GNU Radio block for RTSA-like spectrum visualization using OpenCL and OpenGL acceleration

Gqrx SDR

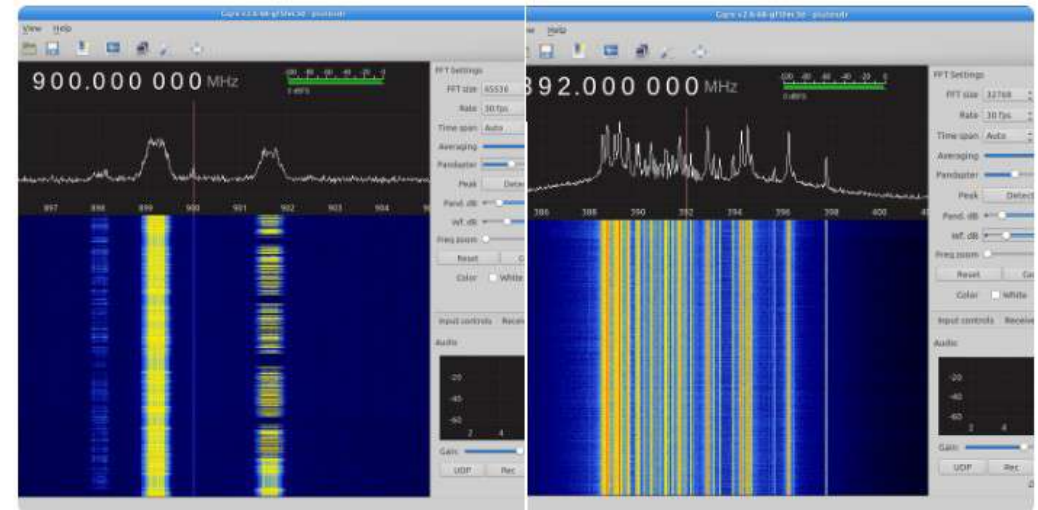

- ▶ gqrx
 - Gqrx is an open source software defined radio receiver (SDR) powered by the GNU Radio and the Qt graphical toolkit.
 - Change frequency, gain and apply various corrections (frequency, I/Q balance).
 - AM, SSB, CW, FM-N and FM-W (mono and stereo) demodulators.
 - Special FM mode for NOAA APT.
 - Variable band pass filter.
 - AGC, squelch and noise blankers.
 - FFT plot and waterfall.
 - Record and playback audio to / from WAV file.
 - Record and playback raw baseband data.
 - Spectrum analyzer mode where all signal processing is disabled.

SDRangel

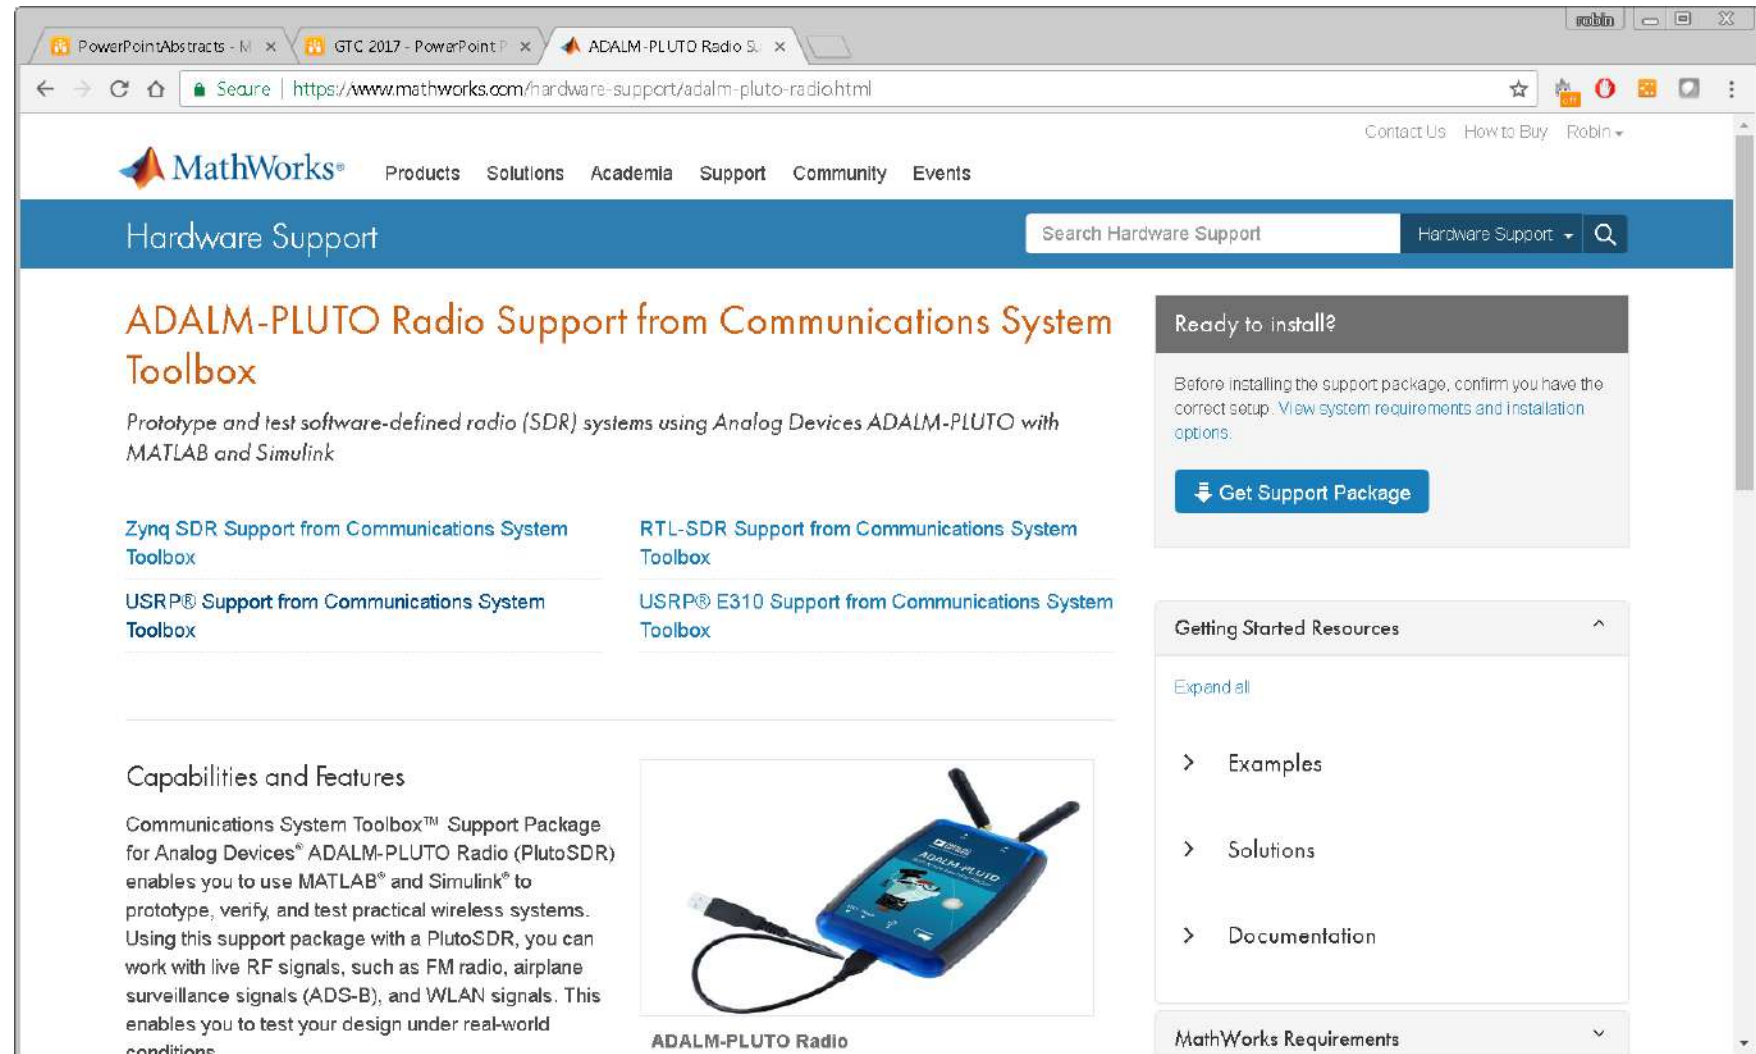

<https://github.com/f4exb/sdrangel>

- **SDRangel** is an Open Source Qt5 / OpenGL 3.0+ SDR and signal analyzer frontend to various hardware (including Pluto)
- C, C++
- Decoders built in
- Linux, Windows

- ▶ Native MATLAB and Simulink support
 - Hardware Support Package
- ▶ ADI's IIO system object
 - On github

The screenshot shows the MathWorks website page for ADALM-PLUTO Radio Support. The page features the MathWorks logo and navigation links (Products, Solutions, Academia, Support, Community, Events). The main heading is "ADALM-PLUTO Radio Support from Communications System Toolbox". Below this, a subheading reads "Prototype and test software-defined radio (SDR) systems using Analog Devices ADALM-PLUTO with MATLAB and Simulink". There are four links to other support packages: "Zynq SDR Support from Communications System Toolbox", "RTL-SDR Support from Communications System Toolbox", "USRP® Support from Communications System Toolbox", and "USRP® E310 Support from Communications System Toolbox". A section titled "Capabilities and Features" describes the support package's ability to use MATLAB and Simulink for prototyping and testing wireless systems. An image of the ADALM-PLUTO Radio hardware is shown. On the right side, there is a "Ready to install?" section with a "Get Support Package" button, and a "Getting Started Resources" section with links to Examples, Solutions, and Documentation. The page also includes a "MathWorks Requirements" section at the bottom right.

The most important thing in education : TextBooks and Labs

- ▶ Dr. Alex Wyglinski
 - WPI
- ▶ Dr. Di Pu
- ▶ Dr. Travis Collins

- ▶ Dr. Dennis Silage
 - Temple

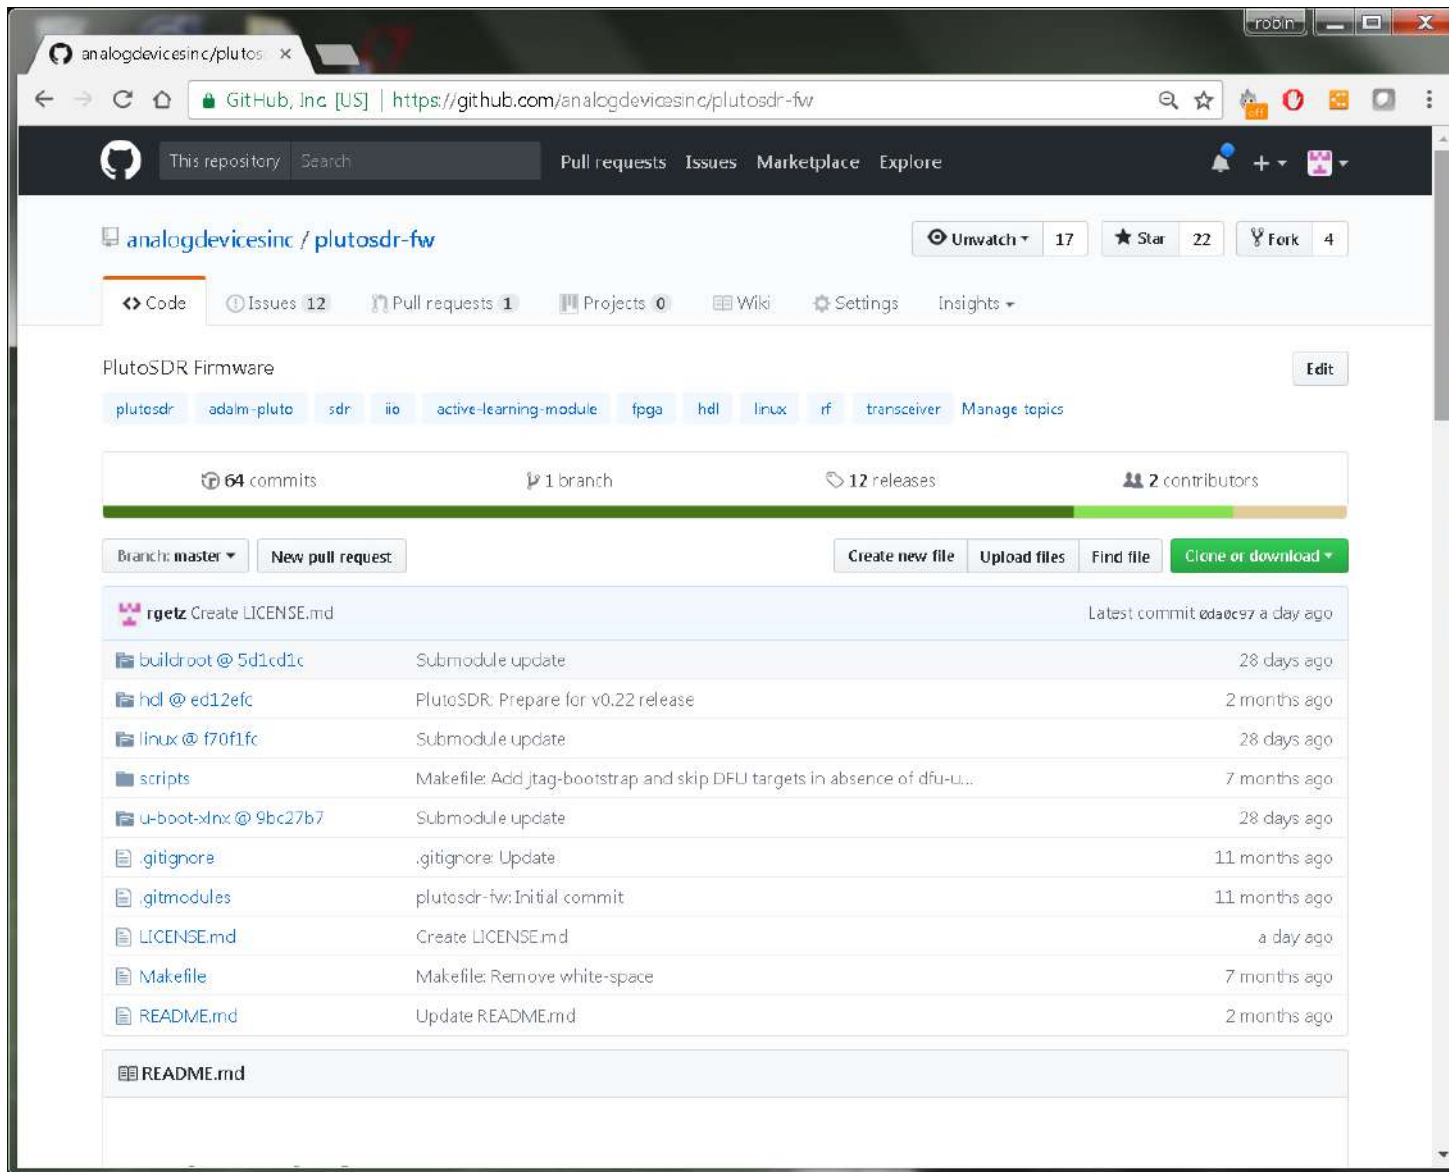

ADALM-PLUTO runs embedded Linux!

- ▶ U-Boot
- ▶ Linux 4.6.0 kernel
 - Root password:
 - “analog”
- ▶ buildroot
 - Busybox
- ▶ ~2 second boot time
- ▶ 32Mbytes of Flash
- ▶ 512Mbytes of DDR3
- Boot process
 - U-Boot boots from SPI flash
 - Checks button,
 - if pressed DFU flash mode
 - Checks boot mode
 - Previous kernel can tell U-Boot to go into different modes
 - # **device_reboot**
 - Usage: /usr/sbin/device_reboot {ram|sf|reset|verbose|break}
 - sf : Reboot and enter Serial Flash DFU mode
 - ram : Reboot and enter RAM DFU mode
 - reset : Reboot
 - verbose: Reboot and start serial console Verbose
 - break : Reboot and HALT in u-boot
 - DFU ram mode – loads image into RAM and boots it – great for testing
 - Default load U-Boot FIT image, and check CRC, then boot it

Interact with U-Boot via serial console with UART adapter ADALM-JTAGUART

Open Source Firmware

► Build Instructions:

```
git clone --recursive https://github.com/analogdevicesinc/plutosdr-fw.git
cd plutosdr-fw
export CROSS_COMPILE=arm-xilinx-linux-gnueabi-
export PATH=$PATH:/opt/Xilinx/SDK/2016.2/gnu/arm/lin/bin
export VIVADO_SETTINGS=/opt/Xilinx/Vivado/2016.2/settings64.sh
make
```

► Results in

File	Comment
pluto.frm	Main PlutoSDR firmware file used with the USB Mass Storage Device
pluto.dfu	Main PlutoSDR firmware file used in DFU mode
boot.frm	First and Second Stage Bootloader (u-boot + fsbl + uEnv) used with the USB Mass Storage Device
boot.dfu	First and Second Stage Bootloader (u-boot + fsbl) used in DFU mode
uboot-env.dfu	u-boot default environment used in DFU mode
plutosdr-fw-vX.XX.zip	ZIP archive containing all of the files above
plutosdr-jtag-bootstrap-vX.XX.zip	ZIP archive containing u-boot and Vivado TCL used for JTAG bootstrapping

Building the firmware images

- Download and install Xilinx FPGA Tools

- Vivado HLx **2016.4: WebPACK** and Editions - Linux Self Extracting Web Installer
- During installation check under design tools **Software Development Kit (SDK)**
- Under devices SoC make sure **Zynq-7000** is selected
- Xilinx gcc tools are distributed as 32-bit binaries you may need to add 32-bit libs

```
michael@HAL9000:~/devel$ dpkg --add-architecture i386
```

```
michael@HAL9000:~/devel$ apt-get update
```

```
michael@HAL9000:~/devel$ sudo apt-get install libc6:i386 libstdc++6:i386
```

- Install other build dependencies

```
michael@HAL9000:~/devel$ sudo apt-get install git build-essential fakeroot libncurses5-dev libssl-dev ccache  
michael@HAL9000:~/devel$ sudo apt-get install dfu-util u-boot-tools device-tree-compiler libssl1.0-dev mtools
```

- Clone and build the Firmware image

```
michael@HAL9000:~/devel$ git clone --recursive https://github.com/analogdevicesinc/plutosdr-fw.git  
michael@HAL9000:~/devel$ cd plutosdr-fw  
michael@HAL9000:~/devel/plutosdr-fw$ export CROSS_COMPILE=arm-xilinx-linux-gnueabi-  
michael@HAL9000:~/devel/plutosdr-fw$ export PATH=$PATH:/opt/Xilinx/SDK/2016.4/gnu/arm/lin/bin  
michael@HAL9000:~/devel/plutosdr-fw$ export VIVADO_SETTINGS=/opt/Xilinx/Vivado/2016.4/settings64.sh  
michael@HAL9000:~/devel/plutosdr-fw$ make
```

Customizing the PlutoSDR filesystem

► Customize buildroot target packages

```
michael@HAL9000:~/devel/plutosdr-fw$ cd buildroot
michael@HAL9000:~/devel/plutosdr-fw/buildroot$ make menuconfig
michael@HAL9000:~/devel/plutosdr-fw/buildroot$ make savedefconfig
michael@HAL9000:~/devel/plutosdr-fw/buildroot$ cd ..
michael@HAL9000:~/devel/plutosdr-fw$ make
```

► Customize buildroot busybox tools

```
michael@HAL9000:~/devel/plutosdr-fw/buildroot$ make busybox-menuconfig
michael@HAL9000:~/devel/plutosdr-fw/buildroot$ cp output/build/busybox-*/.config board/pluto/busybox-*.config
michael@HAL9000:~/devel/plutosdr-fw$ make
```

Customizing the PlutoSDR filesystem

Adding files

- ▶ For temporary modifications
 - Modify the target filesystem directly and then rebuild the image
- ▶ For permanent additions
 - **Post-build scripts**
 - Are shell scripts called after Buildroot builds all the selected software, but before the rootfs images are assembled.

```
michael@HAL9000:~/devel/plutosdr-fw$ cp ~/foobar.sh buildroot/output/target/sbin/  
michael@HAL9000:~/devel/plutosdr-fw$ make
```

- ▶ **Filesystem overlays**
 - A tree of files that is copied directly over the target filesystem after it has been built.

```
michael@HAL9000:~/devel/plutosdr-fw$ cat buildroot/board/pluto/post-build.sh  
[ - snip -]  
${INSTALL} -D -m 0644 ${BOARD_DIR}/input-event-daemon.conf ${TARGET_DIR}/etc/  
[- snip --]
```

Cross-compiling external applications using sysroot

- ▶ Along with each PlutoSDR firmware release we also provide the buildroot generated sysroot.

```
michael@HAL9000:~/devel$ wget https://github.com/analogdevicesinc/plutosdr-fw/releases/download/v0.27/sysroot-v0.27.tar.gz
michael@HAL9000:~/devel$ tar xzvf sysroot-v0.27.tar.gz
michael@HAL9000:~/devel$ git clone https://github.com/PlutoSDR/dump1090.git
michael@HAL9000:~/devel$ cd dump1090
michael@HAL9000:~/devel/dump1090$ CC=arm-xilinx-linux-gnueabi-gcc CFLAGS=-sysroot=../staging LDFLAGS=-sysroot=../staging make

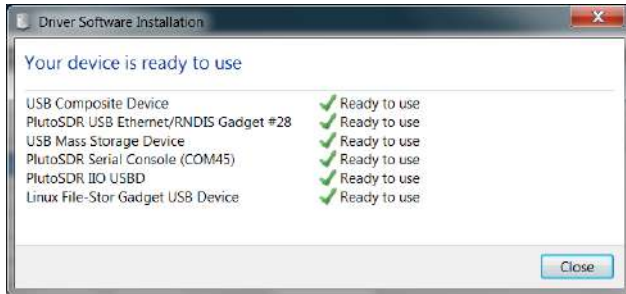

arm-xilinx-linux-gnueabi-gcc --sysroot=../staging -c dump1090.c
arm-xilinx-linux-gnueabi-gcc --sysroot=../staging -c anet.c
arm-xilinx-linux-gnueabi-gcc -g -o dump1090 dump1090.o anet.o --sysroot=../staging -liio -lpthread -lm -lad9361

michael@HAL9000:~/devel/dump1090$ scp dump1090 root@192.168.2.1:/sbin/
```

- ▶ This allows you to later compile dynamically linked applications that can be executed on the PlutoSDR.

Cross platform

► Runs on Windows

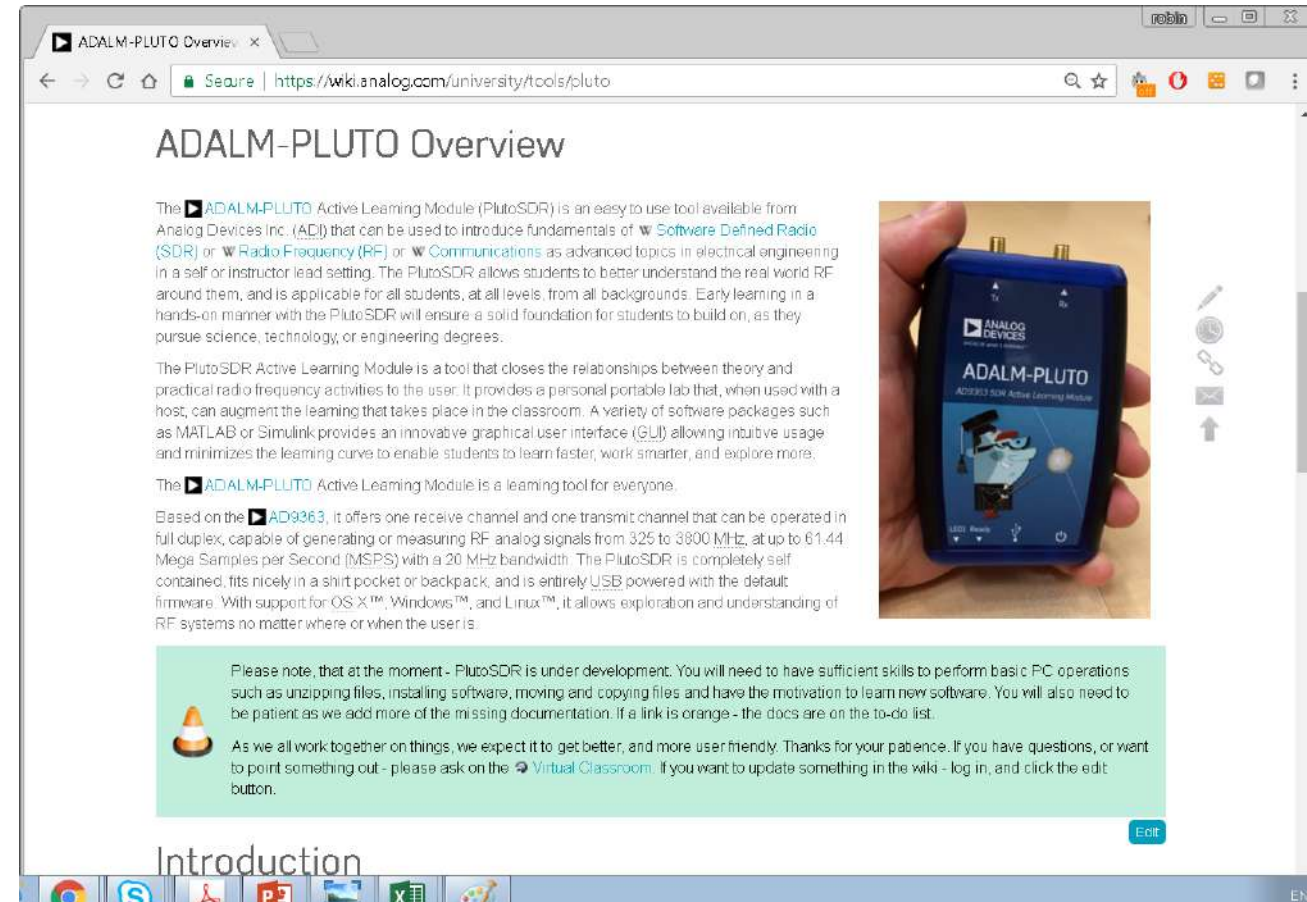

► Linux and OS-X

ADALM-PLUTO Docs – online now!

Stupid Tricks

- ▶ Run scripts from USB drive (supported in default image)
 - The Pluto will automount any USB mass storage device such as thumb drive or Hard Drives. The automounter will then look for some special file names:
 - `runme[0-9].sh` which it will run as a shell script
 - `runme[0-9]` which it will run as a binary file.

```
#!/bin/sh
```

```
# the default directory the script runs in is /dev, so change to the drive  
cd /media/sda1/
```

```
# create a file  
touch foobar
```

```
# change the RX_L0 to 2.4GHz  
iio_attr -a -c ad9361-phy RX_L0 frequency 2400000000
```

```
ACTION=remove_all /lib/mdev/automounter.sh
```

Replace the input-event-daemon .conf file

Default file:

```
#  
# /etc/input-event-daemon.conf  
#  
  
[Global]  
listen = /dev/input/event0  
  
[Keys]  
BTN_0      = ACTION=remove_all /lib/mdev/automounter.sh
```

Replace it with one from USB drive, which plays back pre-recorded files, record waveforms, or runs custom application, and then restart input-event-daemon

Play a CW at 908,460,000 Hz

```
#!/bin/sh

# the default directory the script runs in is /dev, so change to the drive
cd /media/sda1/

# create a file
touch foobar.txt

echo default-on > /sys/class/leds/led0:green/trigger >> foobar.txt

# Set the LO up
/usr/bin/iio_attr -a -c ad9361-phy TX_LO frequency 908460000 >> foobar.txt

# Set the Sample frequency up, tone will appear at sampling_frequency/32
/usr/bin/iio_attr -a -c -o ad9361-phy voltage0 sampling_frequency 32000000 >> foobar.txt

# Turn the attenuation down
/usr/bin/iio_attr -a -c -o ad9361-phy voltage0 hardwaregain 0 >> foobar.txt

# https://wiki.analog.com/resources/tools-software/linux-drivers/iio-transceiver/ad9361#bist\_tone
# Inject 0dBFS tone at Fsample/32 into TX (all channels enabled)
/usr/bin/iio_attr -a -D ad9361-phy bist_tone "1 0 0 0" >> foobar.txt

cd /root
```

Cell phone jammers

Company web site:

This Handheld Selectable 8 band All Cell Phone Signal Jammer & WiFi GPS L1 All in one Jammer High-capacity (USA Version) suit for USA, against 4G LTE networks 3G GSM cellphone signals, and blocking WIFI and GPS L1. And it great use for office, school, home to blocks internet browse, cellphone conversation and GPS signal, one device to coverage all 4G 3G GSM WIFI GPS frequencies, no need any other device to suppress wireless signal in your office, home, school.

FCC web site:

The use of "cell jammers" or similar devices designed to intentionally block, jam, or interfere with authorized radio communications (signal blockers, GPS jammers, or text stoppers, etc.) is a violation of federal law. Also, it is unlawful to advertise, sell, distribute, or otherwise market these devices to consumers in the United States. These devices pose serious risks to critical public safety communications, and can prevent you and others from making 9-1-1 and other emergency calls. Jammers can also interfere with law enforcement communications. Operation of a jammer in the United States may subject you to substantial monetary penalties, seizure of the unlawful equipment, and criminal sanctions including imprisonment.

**JAMMING CELL PHONES AND GPS
EQUIPMENT IS AGAINST THE LAW!**

Record files in the cell phone bands to look for CW

Thanks
